## NAIT Graduate Employment Rates by Program Summary Cluster

### **Please note:**

- This data is collected from program graduates approximately six months after the end of the year they graduate.
- Employment includes all employment, which may or may not be directly related to the field for which graduates have trained.
- The employment rate is calculated by  $(\text{graduates employed}) \div (\text{graduates employed} + \text{graduates looking for employment})$ .
- Only those graduates who responded to the survey are included in the calculation.
- The count of graduates in this report may not equal the total number of graduates for the program.

\*This illustration compiles an employment or placement rate of graduates from NAIT's full-time programs. The employment rate is the ratio of graduate survey respondents who indicated that they were employed over the number of graduates who were available for employment. Note that only active programs are depicted in this report.
